

Operational Metrics — 2026-04-10

Post-hardening session metrics confirming system health.

Test Results

Suite	Result	Details
Unit tests (Vitest)	575/575 passed (100%)	25 test files, 5.4s
E2E auth tests (Playwright)	27/27 passed (100%)	auth-api (15), auth-flows (5), spoofing-security (7)

CloudWatch Error Rate

Metric	Before Session	After Session
AppErrorCount (per 5-min window)	~36 (pre-session baseline)	0-2 (post-session, measured over 30 minutes after final deploy)
Root cause of pre-session errors	process.on("SIGTERM") in Edge Runtime (instrumentation.ts)	Fixed in commit e3bf340

ECS Deployment

Attribute	Value
Task definition	denali:124
Status	ACTIVE, 1/1 running
Change	Removed RESEND_API_KEY and RESEND_FROM_EMAIL secret references
Previous failure	Task def referenced deleted Secrets Manager keys (ResourceInitializationError)

Commits This Session

SHA	Description
4237b8c	Legal docs: Resend to SES reconciliation + checker fix + CLAUDE.md pricing
05ba516	PWA hardening: cache clearing, queue auth, SW lifecycle, sync notifications
636c473	Build fix: missing config/messages.ts
293467b	Build fix: missing clearAllCaches + metrics module + package deps
c955ee6	Build fix: missing metrics module files
e3bf340	Build fix: instrumentation.ts Edge Runtime guard

d92fcb7	HIPAA: strip PHI from logs, add audit entries, purge health_reports
6e93917	Strip PHI from skill trigger logs
3307903	audit_logs append-only hardening (baseline DDL, REVOKE, Update type)
abb3482	FHIR audit log semantics: success vs failure, 5-min dedup
